Title

Smooth Representations of Locally Compact Totally Disconnected Groups (Part 2)

Speaker: Travis Grigsby, Oklahoma State University
Date: Sep 27, 2023
Time: 3:30 PM
Room: MSCS 509

Abstract: A famous result in Representation Theory is Schur’s Lemma, which gives a classification the endomorphisms of an irreducible smooth representation of a group G. This talk will follow Chapter 3 of Fiona Murnaghan’s notes, building the foundational material we need to, as well as showing some examples and properties of different representations of G.
